If the engine will stay running with the throttle advanced, the problem should be the IAC valve. I've seen oil pressure sensor switch problems on carb'd models, whereupon they shut the electric fuel pump off, but if the oil pressure sensor switch isn't seeing oil pressure, than it should sound a constant beep as this would be a rather critical sensor failure.

The thermal fuse in a dryer is a safety component that trips if the air flowing through the drum overheats. A blocked exhaust vent is the most common reason the air overheats. When the thermal fuse blows in an electric dryer, the display lights still work but the drive motor won't run. You can't reset the thermal fuse; if it's blown, replace it with the manufacturer-approved
