Linear algebra is the branch of mathematics concerning linear equations such as: $ax + by = c$, linear maps such as: $(x, y) \mapsto ax + by$, and their representations in vector spaces and through matrices.. Linear algebra is central to almost all areas of mathematics. For instance, linear algebra is fundamental in modern presentations of geometry, including for defining basic objects such as lines, planes ...

In algebra, which is a broad division of mathematics, abstract algebra (occasionally called modern algebra) is the study of algebraic structures. Algebraic structures include groups, rings, fields, modules, vector spaces, lattices, and algebras. The term abstract algebra was coined in the early 20th century to distinguish this area of study from the other parts of algebra.

And part 2 is Magneto-statics! Both of these obey nearly same equations, and have the same solutions, and affect materials similarly (in a linear fashion). So you learn electrostatics, and then you learn that magnetism is the same thing all over again. So the two parts are written almost exactly the same! (Here's the force on a particle, now here's the field, now here's the potential, now ...
