Rodeo V6 Engine Problems

A V6 engine is a six-cylinder piston engine where the cylinders share a common crankshaft and are arranged in a V configuration. The first V6 engines were designed and produced independently by Marmon Motor Car Company, Deutz Gasmotoren Fabrik and Delahaye. Engines built after World War II include the Lancia V6 engine in 1950 for the Lancia Aurelia, and the Buick V6 engine in 1962 for the ...

Holden Rodeo Problems & Reliability Issues | CarsGuide

THE Rodeo's V6 is the same Alloytec V6 that's used in the current Commodore. Holden offers a dual-fuel kit for the Alloytec V6 in the Commodore, but it has been modified for running LPG. Holden had been working on a similar installation for the Rodeo, but backed away from it because of difficulties having the LPG-compatible engine fitted in the Thailand plant where the Rodeo is built.

Difference between 4ja1 and 4jb1 engine

Vacuum leaks are not uncommon, and they are the source of many engine performance problems, including failure to start. Depending on where the fault is located, vacuum leaks can be hard to find. But major vacuum leaks that can make the engine hard to start may happen in the power booster vacuum hose, EGR valve, another main vacuum hose, or a blown head or intake manifold gasket.

My Engine Cranks but Won't Start (6 Reasons Why) - AxleAddict

So this engine code article applies to Toyota, Chevrolet, Ford, Nissan, Honda, GMC, Dodge, etc. Basically this means that an oxygen sensor in bank 1 has detected a lean condition (too much oxygen in the exhaust). On V6/V8/V10 engines, Bank 1 is the side of the engine that has cylinder #1. The P0171 is one of the more common trouble codes.

OBD-II DTC: P0171 System Too Lean (Bank 1)

The coolant system on any vehicle, even when the vehicle's radiator appears to be full, may not adequately cool the vehicle's engine. This could be because of an air bubble in the car's cooling system that has developed and is keeping the coolant from getting to the car's engine. In situations where your radiator is working normally, "burping" the cooling system may be the only way ...

How to Burp a Vehicle's Coolant System | DoItYourself.com

The vast majority of leaks are due to degraded engine gaskets, oil pan leaks, oil seals or bad connections. Crawl under the car and check the oil pan seals. While you're there also check the oil pan drain plug. Next check the timing cover seal and the valve cover gaskets. Problems here can require extensive repairs that are not cheap. Don't ...
